

SendCleared – Feedback Report

I set up two test mailings via two different ESPs and ran them through SendCleared: The first campaign for a telecommunications provider via Mapp Engage and the second campaign for an e-commerce customer (online shop) via Klaviyo.

1. Dashboard & Onboarding

- **First impression:** After the initial login, the dashboard seemed very tidy and clean. After setting up, the customers were displayed as intended.
- **Critical contrast problem (UI/Accessibility):** Both during login and when adding new customers under “*Your Clients*”, the font color in the input fields is an extremely light gray. On a white background, I could barely see the text I typed – it only became legible when I manually highlighted it with the mouse. This should urgently be adjusted to a high-contrast color value (e.g., charcoal/black).

The image shows a login form for SendCleared. The form is titled "Log in to SendCleared" in a dark blue font. Below the title, there are two input fields: "Email" and "Password". The "Email" field contains the text "jagemannalexander@gmail.com". The "Password" field contains a series of dots. Below the input fields is a large orange button labeled "Log In". At the bottom of the form, there is a link that says "Don't have an account? Sign up".

Your clients

Each client gets a unique inbox address. Add it to your ESP test list and every test send is automatically QA checked.

Test1

+ Add client

No clients yet. Add your first client above to get started.

2. QA Report & Test Results (Mapp Engage & Klaviyo)

- **What I found positive:**
 - The check for subject lines that are too long works reliably (something to keep in mind with dynamic personalization like first/last name).
 - Warnings for missing plain-text versions work cleanly.
 - Missing aria-label attributes for CTAs/buttons were detected and reported directly in the Klaviyo test run.
- **False Positives / Misidentifications:**
 - **Unsubscribe link:** With customer-specific unsubscribe links (e.g., redirecting directly to the customer portal instead of the ESP system link), the detection fails.

The screenshot displays a QA report interface with a sidebar menu on the left containing items like 'Systemnachrichten', 'Beschränkungen', 'Kalender', 'Zielgruppe', 'Inhalt', 'Statistik', 'Automatisierungen', 'Benutzerverwaltung', 'Datenverwaltung', and 'Administration'. The main content area is divided into two panels. The left panel, titled 'Links & tracking', shows a summary of 50/100 links and a list of issues, including a critical warning: 'No unsubscribe link detected - violates CAN-SPAM, GDPR and ESP policies.' The right panel shows the HTML code for the email content, with a red box highlighting a link that is not an unsubscribe link, which is why the detection failed.

- **Tracking:** Missing UTM parameters are declared as a warning. This should rather be issued as pure information, as we use alternative tracking systems without UTMs for some customers.
- **Bugs & Parser Problems:**
 - **Preheader / Preview text:** Was not detected in Mapp Engage – it is inserted here as a manual HTML snippet.

- **Link Counting:** Discrepancy in counting (20 links were displayed in the overview, while under “View all CTAs and links” there were 23).
- **Images & Alt-Texts:** For Klaviyo, 1 out of 16 images was criticized for missing alt-text, even though the mailing only contains 15 images (presumably a tracking pixel/spacer was counted). Furthermore, I lacked the information here about *which* specific image it was. (Perhaps it's the tracking pixel?)

3. Client Sharing, Preview & Feature Requests

- **Sharing function:** The function to share with the customer is what I like best and offers real operational added value. The approval/revision request workflow from the client side is intuitive and leaves a solid timestamped audit trail.
- **Mockups & Preview:** The preview is currently only available for desktop and mobile width directly on the share screen. I would like to see flexible widths here (e.g., pixel input) and for the mockups to be visible during the test run before link generation.
- **Dashboard metrics:** A small counter/badge in the dashboard would be helpful to show directly how many mails or tests have already been created per customer.
- **Accessibility:** A differentiation for purely decorative graphics would be useful so that empty alt="" tags are not counted as errors (to prevent redundant reading out of e.g. check icons by screen readers).
- **API / Automation:** In the future, I would find an API connection very interesting to connect SendCleared directly with ESPs or automation tools like n8n.

4. Workflow Benefit & Practical Assessment

- **Assessment:** SendCleared is a practical aid for automatically checking the basics of an email and is excellent for less technically savvy people, noticeably facilitating their everyday life as email marketers.
- **Personal perspective:** Since I am technically savvy and could build a similar QA check for my own purposes using AI, I would personally prefer an individual solution or specialized tools. Nevertheless, the integrated sharing function is extremely practical and significantly simplifies the coordination process.
- **Rendering comparison:** Compared to Litmus and Email on Acid, I am definitely still missing a real preview in different email clients – at least for the typical clients that, in my experience, cause the most display errors (Outlook, Gmail, etc.).

5. Feedback on Pricing (Comparison with Litmus & Email on Acid)

I compared the prices and features from the perspective of an agency and as a freelancer with Litmus and Email on Acid:

- **Overall impression:** The pricing of SendCleared is very fair and affordable compared to the two competitors. The fact that a real multi-client preview is missing explains and justifies the lower price.
- **Agency perspective (Telecommunications customer):** For demanding agency customers where client-specific representations are mandatory, I would tend towards Email on Acid. While Litmus provides the most extensive results, it has simply become far too expensive by now.
- **Freelancer perspective (E-commerce / Online shop):** For online shops where the focus is primarily on quick sales and error-free content rather than pixel-perfect rendering in every niche client, I prefer SendCleared. It offers a quick, solid overview of potential problems at an attractive price and simplifies the approval process.
