

SendCleared — build reference

Generated June 2026

Summary metrics

Total hours to MVP	~80 hrs
Phases	4
Infra cost at launch	~£35/mo
Target first paying user	Week 6

Tech stack

Service	Role	Cost
Next.js	Frontend + API routes	Free
Vercel	Hosting + deployment	Free tier
Supabase	Auth + database	Free → £25/mo
CloudMailin	Inbound email	Free to 10k/mo
Claude API (Sonnet)	AI QA engine	~£0.008/check
Stripe	Payments	2.9% + 30p
Resend	Transactional email	Free to 3k/mo
VS Code + GitHub	Already set up	Free
Email on Acid API	Rendering previews (phase 2)	~£75/mo

Phase 1 — Inbound email + QA engine

Weeks 1-2 · ~25 hrs · This is the core product

- CloudMailin account — point MX records for check.sendcleared.com

- Supabase project — auth, database schema (users, clients, campaigns, reports, approvals)
 - Webhook endpoint — receives CloudMailin JSON, stores raw email, triggers QA run
 - MIME parser — extracts subject, preheader, HTML, plain text, links, headers (already prototyped)
 - AI QA engine — Claude Sonnet prompt returning structured JSON report (already prototyped)
 - Report storage — save QA results to Supabase per campaign version
-

Phase 2 — Agency dashboard

Weeks 2-3 · ~20 hrs · What the agency sees every day

- Auth — sign up, log in, password reset (Supabase Auth)
 - Client management — add clients, assign inbox addresses, view history
 - Campaign list — all test sends per client, version history, timestamps
 - QA report view — the full report UI (already designed and prototyped)
 - Manual checklist — list/segment confirmed, send time confirmed, seed address
 - "Generate approval link" — creates unique token, stores in Supabase, returns URL
-

Phase 3 — Client approval page

Week 4 · ~15 hrs · Already designed — just needs wiring up

- Public approval route — `/r/[token]` fetches campaign from Supabase, renders page
 - Email preview — renders HTML in sandboxed iframe, desktop/mobile toggle
 - Approve action — logs approver name, timestamp, IP to Supabase, notifies agency
 - Request changes — saves feedback text to Supabase, emails agency
 - Expiry logic — links expire after 30 days, show friendly expired state
-

Phase 4 — Payments + launch

Weeks 5-6 · ~20 hrs · Get to first paying customer

- Stripe Checkout — Free, Freelancer £19, Agency £49, Studio £99 plans
- Stripe webhooks — handle subscription created, cancelled, payment failed
- Usage limits — enforce free tier (3 approval links/mo), upgrade prompts
- Notification emails — QA report ready, approval received, changes requested (Resend)

- Beta invites to 10 agencies — free access, feedback calls, testimonials

Database schema

sql

```
-- Agency clients
create table clients (
  id uuid primary key default gen_random_uuid(),
  user_id uuid references auth.users,
  name text not null,
  inbox_address text unique not null,
  created_at timestamptz default now()
);

-- Campaign sends
create table campaigns (
  id uuid primary key default gen_random_uuid(),
  client_id uuid references clients,
  subject text,
  from_address text,
  preheader text,
  html_body text,
  plain_text text,
  raw_email text,
  received_at timestamptz default now()
);

-- QA reports
create table reports (
  id uuid primary key default gen_random_uuid(),
  campaign_id uuid references campaigns,
  score integer,
  summary text,
  sections jsonb,
  created_at timestamptz default now()
);

-- Client approvals
create table approvals (
  id uuid primary key default gen_random_uuid(),
  campaign_id uuid references campaigns,
  token text unique not null,
  approver_name text,
  approved_at timestamptz,
  changes_requested text,
  status text default 'pending',
  expires_at timestamptz,
  created_at timestamptz default now()
);
```

Pricing tiers

Tier	Price	Included
Free	£0/mo	3 approval links/mo, SendCleared branding
Freelancer	£19/mo	Unlimited links, 5 clients
Agency	£49/mo	Unlimited, 20 clients, white-label, 3 seats
Studio	£99/mo	Unlimited, unlimited clients, API, multi-seat

Inbox address model

```
Agency: tim@crm360.agency
└─ Client inboxes:
    brightspark@tim.sendcleared.com
    nike@tim.sendcleared.com
    asos@tim.sendcleared.com
```

One persistent address per client. Agency adds it to ESP test list once. Never changes.

First command to run

```
bash

npx create-next-app@latest sendcleared-app
```

Choices:

- TypeScript → Yes
- ESLint → Yes
- Tailwind → Yes
- src/ directory → No
- App Router → Yes
- Customise import alias → No

LP positioning note (to revisit)

Current LP is 70% mistake-catching / 30% approval. Consider flipping — approval workflow is the stronger differentiator vs sendcheck.io. Three options:

1. Keep current, make approval more prominent
2. Flip to approval as primary message — "The professional way to get email campaigns approved"
3. Both equally — "Check it. Clear it. Send it."

Recommendation: Option 2. Mock up revised hero to compare.
